Skills

Development Python, JavaScript, Java, C, React/Redux, Node.js, Express.js, jQuery
Data MongoDB, MySQL, Firebase
Tools Docker, Git, Travis CI

Work Experience

- Aug 2018 – **Software Engineering Intern, Bitcoin Bay**
Oct 2018
 - Developed the signup process using OAuth based authentication with **Passport.js** to onboard new users
 - Implemented an intuitive UI using **React** & used **Socket.IO** for real time payment communication
 - Automated workflow by using Travis CI to build a development pipeline in order to ensure error free builds
 - Created an API that followed **RESTful** principles with **Node.js** that communicated the customer's payment information to the front end

Jul 2018 – **Web Developer Intern, BTNX**
Aug 2018
 - Part of a cross functional team to create responsive websites according to client specifications
 - Utilized **MySQL** to manage databases and perform data integrity checks
 - Automated data aggregation by writing custom scripts using Mozenda
 - Utilized **Agile** development principles to implement new features into an existing C# & .NET codebase

Other Experience

- Founder, Toronto Youth Network**
 - Founded a student led, NPO dedicated to student networking within technology
 - Executed monthly goals, achieving a reach of around 1000 students around the GTA
 - Successfully ran two ~200 participant, 24 hour, hackathons in July 2017 and December 2017

Projects

- Nov 2018 **uSober**, (Hackathon), *Node.js, React*
 - Created a progressive web app that empowers users to make educated inferences as to their cognitive abilities using research based inferences and feature based image classifiers
 - Application uses a custom model using **Google's Cloud Vision API** to identify cognitive impairment built on top of a **React** application
 - Won best use of **machine learning** at Electric City Hacks

Dec 2016 **WeatherMaps**, *Node.js, HTML & CSS*
 - Developed an application that shows weather projections for departure and destination locations; the time of departure, and the time of arrival
 - Application runs on a **Node.js** backend, querying the **Google Maps API** for map data, and **forecast.io** for weather projections

Awards

- Sept 2018 **Finalist, Hack the North 2018 Hackathon**
Built a device that assists the hearing impaired by using sound triangulation and augmented reality using an **Arduino** combined with microphone sensors and a **Node.js** application
- Dec 2018 **2nd Place, Alpha Hacks Hackathon**
Used Google's **Natural Language API** and the **Twitter API** to make a decision to buy or sell a stock based on the current sentiment
- Feb 2017 **3rd Place, Fraser Hacks Hackathon**
Built a web application that curated a music playlist based on the weather using the **Dark Sky API** and **Node.js**

Education

2019 - 2024 **Honors Bachelor of Computer Science Co-op, University of Waterloo**
